## WOW Factor Demonstrated in Third Party Quality Audits

**Stanley, WI, September 1<sup>st</sup>, 2010** – AIB International has rated Film Tech, LLC with a “Superior” rating once again, reiterating the positive return on investment and continuous improvement efforts by the team.

The AIB audit is the most recent in a string of successful customer visits and third party audits for food, medical and government end use.

“Our team has been dedicated to WOWing current and prospective customers in every facet of what we do. From the manufacturing equipment to the documentation and the people leadership to the quality control, there is a reason why we continue to get such high marks from our visitors”, explained Tim Runge, General Manager.

Each roll of film is designed to fit the end use process needs. Stocking programs are customized based on demand schedules and physical performance attributes are tweaked to optimize total cost of ownership.

“The entire Film Tech team has contributed to the effort to design and market specific new products for our primary end use segments in medical and graphic arts applications, utilizing often ignored technologies”, according to Justin Latham, Director of Sales.

“While our core chemistry components are considered commodity items, the total cost of ownership offered at the end of the day by our team is a winning solution!”

Listening to what engineers real problems are, what headaches machine operators are having to suffer through, and knowing what the economic goals are down channel all help contribute to a better proposition.
